

CRANE – MOVIE PEOPLE

JUNIOR

Junior is a light and modular crane with a maximum size ranging from 2 to 3 m, easy to transport and assemble. It can be equipped with a remote or fluid head and be equipped with a kit that interfaces this shooting system with virtual reality.

The Virtus 10 kit tracks the position of the axes of the crane, the head and the Focus, Iris and Zoom motors in space: it processes the major protocols on the market and sends the necessary data for Augmented Reality and Virtual Set.
